

MEDICATION RECORDING

Example one:

1. All medications dispensed during camp must be recorded on a medication log sheet as having been taken by the camper.
2. After each medication administration time, medical personnel must check off and initial that the camper's medication was administered.

Example two:

1. All daily scheduled medications taken by campers have been *dispensed to* and *taken by* the camper
2. All PRN medications are documented as having been given to the camper
3. If PRN medications become scheduled medications, they now are *dispensed to* and *taken by* the camper

This system documents **only additions** to the scheduled medications and assumes campers have received all their scheduled medications. This system is best used if the health services personnel are licensed health care professionals who are dispensing the medications to the campers.
